

## Fork Positioner for Forklift

Forklift Fork Positioner - A fork positioner is actually a device made out of high quality materials designed to be able to endure the most demanding operations and work environments. This particular piece of equipment could enable the individual driving to be able to control the forks hydraulically without leaving the seat. Side shifting units have the added ability to be able to laterally position the arms or the entire load so as to facilitate more accurate carrying and placement in a quicker and more efficient way.

The unique blade pocket design enables operators to securely sway the unit's forks without any worry of damaging the positioning cylinders. This allows the worker the alternative to either execute simultaneous or independent fork movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into blade positioners on existing units.
